

Geomatnet EKO

Product specifications

Product description:

Geotextiles (nets) Geomatnet EKO are made of 100% coir fibres or 100% jute fibres. They are used as a temporary erosion protection on the steep slopes, embankments of roads and railways.

- ① ideal for all inclinations of natural slopes

Function:

Certificates:

The product is not covered by a harmonized standard (is not a **permanent** part of the building) and therefore not subject to the issue of the document "Declaration of performance".

Notice! These products are manufactured with a high proportion of hand work at several different locations by weaving natural raw materials of varying properties and in varying humidity. Therefore, individual packages of the same product may not always have the same parameters - it is necessary to calculate with a tolerance of up to $\pm 10\%$ of the weight, mesh size, package size and color. Even if the delivered packages look different at the sight, the tolerance of parameters does not affect their performance at all. A potential difference in colour will be unified under the influence of sunlight and weathering after a few months.

Supplier of product: **GEOMAT s.r.o.**
